Saving Screenshot 2026-05-06 085125.png to Screenshot 2026-05-06 085125.png

```
import cv2
import numpy as np

# Assuming 'filename' from the previously uploaded image is available in the kernel
# If not, you might need to re-upload or specify the correct file name here.
# For this example, we'll use the 'filename' variable from the kernel state if it exists.
# Otherwise, assume the uploaded file is in the /content/ directory.

# Check if 'filename' is defined in the kernel state
# if 'filename' in locals() or 'filename' in globals():
#     img_path = filename
# else:
#     # Fallback if filename is not found or directly use the name if known
#     img_path = 'Screenshot 2026-05-06 085125.png' # Replace with actual uploaded filename if differ

# Given the kernel state, 'filename' is 'Screenshot 2026-05-06 085125.png'
# And it's available in the /content/ directory
img = cv2.imread('/content/' + filename)

# Add a check to ensure the image was loaded successfully
